Sequence 1, Application US/09479409

Patent No. 6225106

GENERAL INFORMATION:

APPLICANT: Geritise, Gijsbert

APPLICANT: Quax, Wilhelmus J.

TITLE OF INVEWTION: EXPRESSION SYSTEM FOR ALTERED

TITLE OF INVENTION: EXPRESSION LEVELS

NUMBER OF SEQUENCES: 37

CORRESPONDENCE ADDRESS:

ADDRESSEE: Genencor International

STREET: 925 Page Mill Road

COTTY: Palo Alto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         seq_name: /cgn2_6/ptodata/2/ina/6B_COMB.seq:US-09-479-409-1

    Patent No. 5912153
    GENERAL INFORMATION:
    APPLICANT: Enderlin, Carol S.
    APPLICANT: Selitrennikoff, Claude P.
    TITLE OF INVENTION: (1,3)B-glucan synthase genes and
    TITLE OF INVENTION: inducible inhibition of fungal growth using the antisense
    TITLE OF INVENTION: constructs devived therefrom.
    NUMBER OF SEQUENCES: 6

; Sequence 37, Application Us/09268347
; Patent No. 6331018.
; GRNERAL INFORMATION:
; APPLICANT: LOSMOTC, Sheena M.
; TITLE OF INVENTION: RECOMBINANT HAEMOPHILUS INFLUENZAE ADHESIN PROTEINS
; TITLE OF INVENTION NUBBER: US/09/268,347
; CURRENT PELLING DATE: 1999-03-16
; NUMBER OF SEQ ID NOS: 54
; SEG ID NO 37
; LENGTH: 1812
; TYPE: DNA
; ORGANISM: Haemophilus influenzae

Tissue Procurement: Lothar Hennighausen Ph.D., Robin Humphreys
cDNR Library Preparation: Life Technologies, Inc.
cDNR Library Arrayed by: The I.M.A.G.E. Consortium (LINL)
DNR Sequencing by: Incyte Genomics, Inc.
clone distribution: MGC clone distribution information can be
found through the I.M.A.G.E. Consortium/LINL at:
http://image.lln.gov
Plate: LiAM6511 row: n column: 10
High quality sequence stop: 569.
Location/Qualifiers
I. 622

Location/Qualifiers
